

DOUBLE-ENDED GROUNDING BOLT

Abstract

Method and arrangement for providing a grounding element (1) configured for assuring an electrical connection between a structural element and an electrical terminal and that includes a first portion (2) provided with a thread (5), a second portion (3) provided with a thread (6), and a central section (4) having a portion (4a) with at least one projecting ridge (7) that connects the first portion (2) to the second portion (3). The central section (4) has a first contact surface (8) in the plane where the central section (4) is connected to the second portion (3).
